

# ABSTRACT

A novel compound represented by a formula [ 1] wherein  $R^1$  and  $R^2$  respectively represent a light or heavy hydrogen atom,  $R^3$  represents a light or heavy hydrogen atom or a methyl group in which three hydrogen atoms are respectively light or heavy hydrogen atoms, and  $R^4$  is a norbornyl group provided that four or more hydrogen atoms in the norbornyl group are heavy hydrogen atoms; and a novel polymer produced by polymerization of a composition comprising the compound are disclosed.
